Sgt Bash - RW-TSB

Sergeant Bash is the robot that shoots flame; he uses a pull back motor and is very fast. Bash has jaws, which were designed specifically for the toy, but are now being used to modify the real robot. A button on the top of the body shelf activates the jaws. At the rear Bash can change his circular saw into a large sized drill. However, the most impressive part of Bash is his ability to shoot (plastic) flame. He fires this flame at three tyre targets to score points.

Sir Killalot - RW-TSK

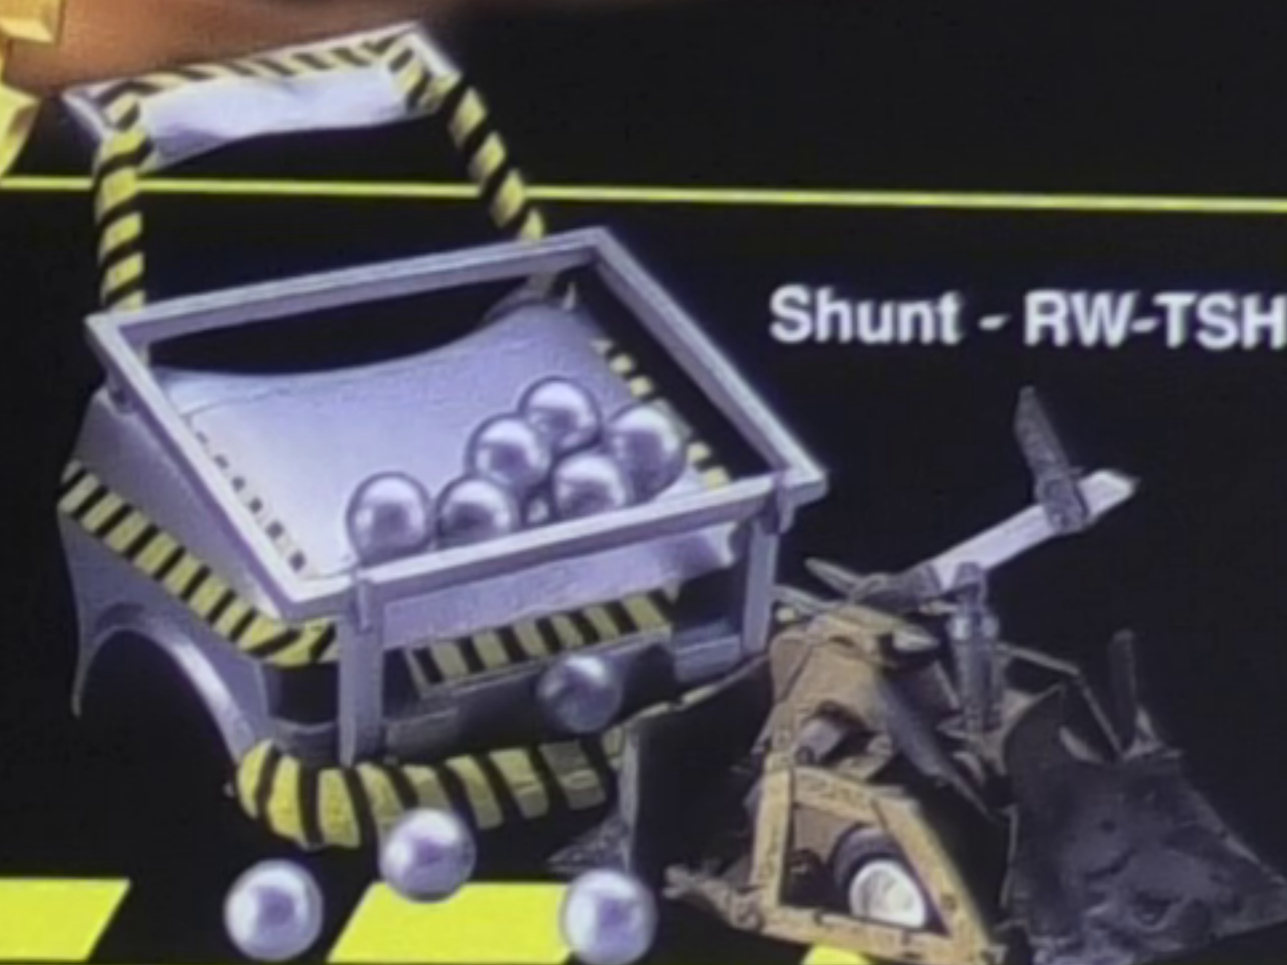

The most popular of all the house robots has a friction motor that can be powered by pushing Killalot forward. Killalot then has incredible power and can move through all kinds of debris. Both his arms move and his pincers are spring loaded. His lance can be removed and replaced with a huge sledgehammer. His accessory is the massive seesaw and ball. The object of the task is to get Killalot to push the ball over the ramp.

Matilda - RW-TM

Matilda has a powerful pull back motor and, like the real thing, travels very fast. She has a devastating flip action, which can be activated by pressing the button on top of Matilda's head. She can flip all the robots and also has a moveable chainsaw and an extra weapon that can interchange with this chainsaw. This is a vertical spinning disc, which will now be implemented into future shows and has the ability to shred other robots. The accessory is the swinging door gate, which Matilda has to be directed through in order to score points.

ACTION TOYS WITH ACCESSORIES

Shunt - RW-TSH

Shunt has a special pull back motor that changes direction when the robot hits an obstacle. Shunt's major weapon is a fearsome axe that is activated by pressing it down and then letting go. The axe punches down with devastating consequences. Shunt's extra weapon is a circular saw that can be placed over the axe. The accessory supplied with Shunt is Multiball - the front end of a car loaded with silver balls. When Shunt hits the bumper the balls are released. You'll recognise this obstacle from the Robot Wars "Pinball" event.

Hypno-disc - RW-THD

The first replica competitor robot complete with its unique spinning weapon that can destroy a robot in a millisecond. Hypno-disc has a pull back action; the motor is so powerful that extra weight has been added to slow it down. The spinning disc is connected to the axle and spins ferociously as the robot moves forward. The interchangeable addition for this toy is Hypno's body cover. This can be removed revealing wires and motor parts. An extra cover has been designed that has protective fins. The creators of Hypno-disc were so pleased with this modification they have copied the design and it now appears on the real Hypno-disc. The accessory is a wall of breeze blocks that are built up to form the Robot Wars logo.

Dead Metal - RW-TDM

With his sharp spikes, Dead Metal was the most difficult to transform into a toy and has the most technical mechanisms. It is again a pull back toy. Dead Metal's pincers are spring loaded and the grinding wheel is mounted on a moveable engine. It also has a space at the rear where an extra deadly spike can be inserted. Dead Metal scores points by crashing down a pyramid of barrels.

N.B. ALL TOYS ARE SUITABLE FOR
AGES 5 and UPWARDS

SHUNT

R/C Shunt - RW-RCSH

Radio Controlled Shunt

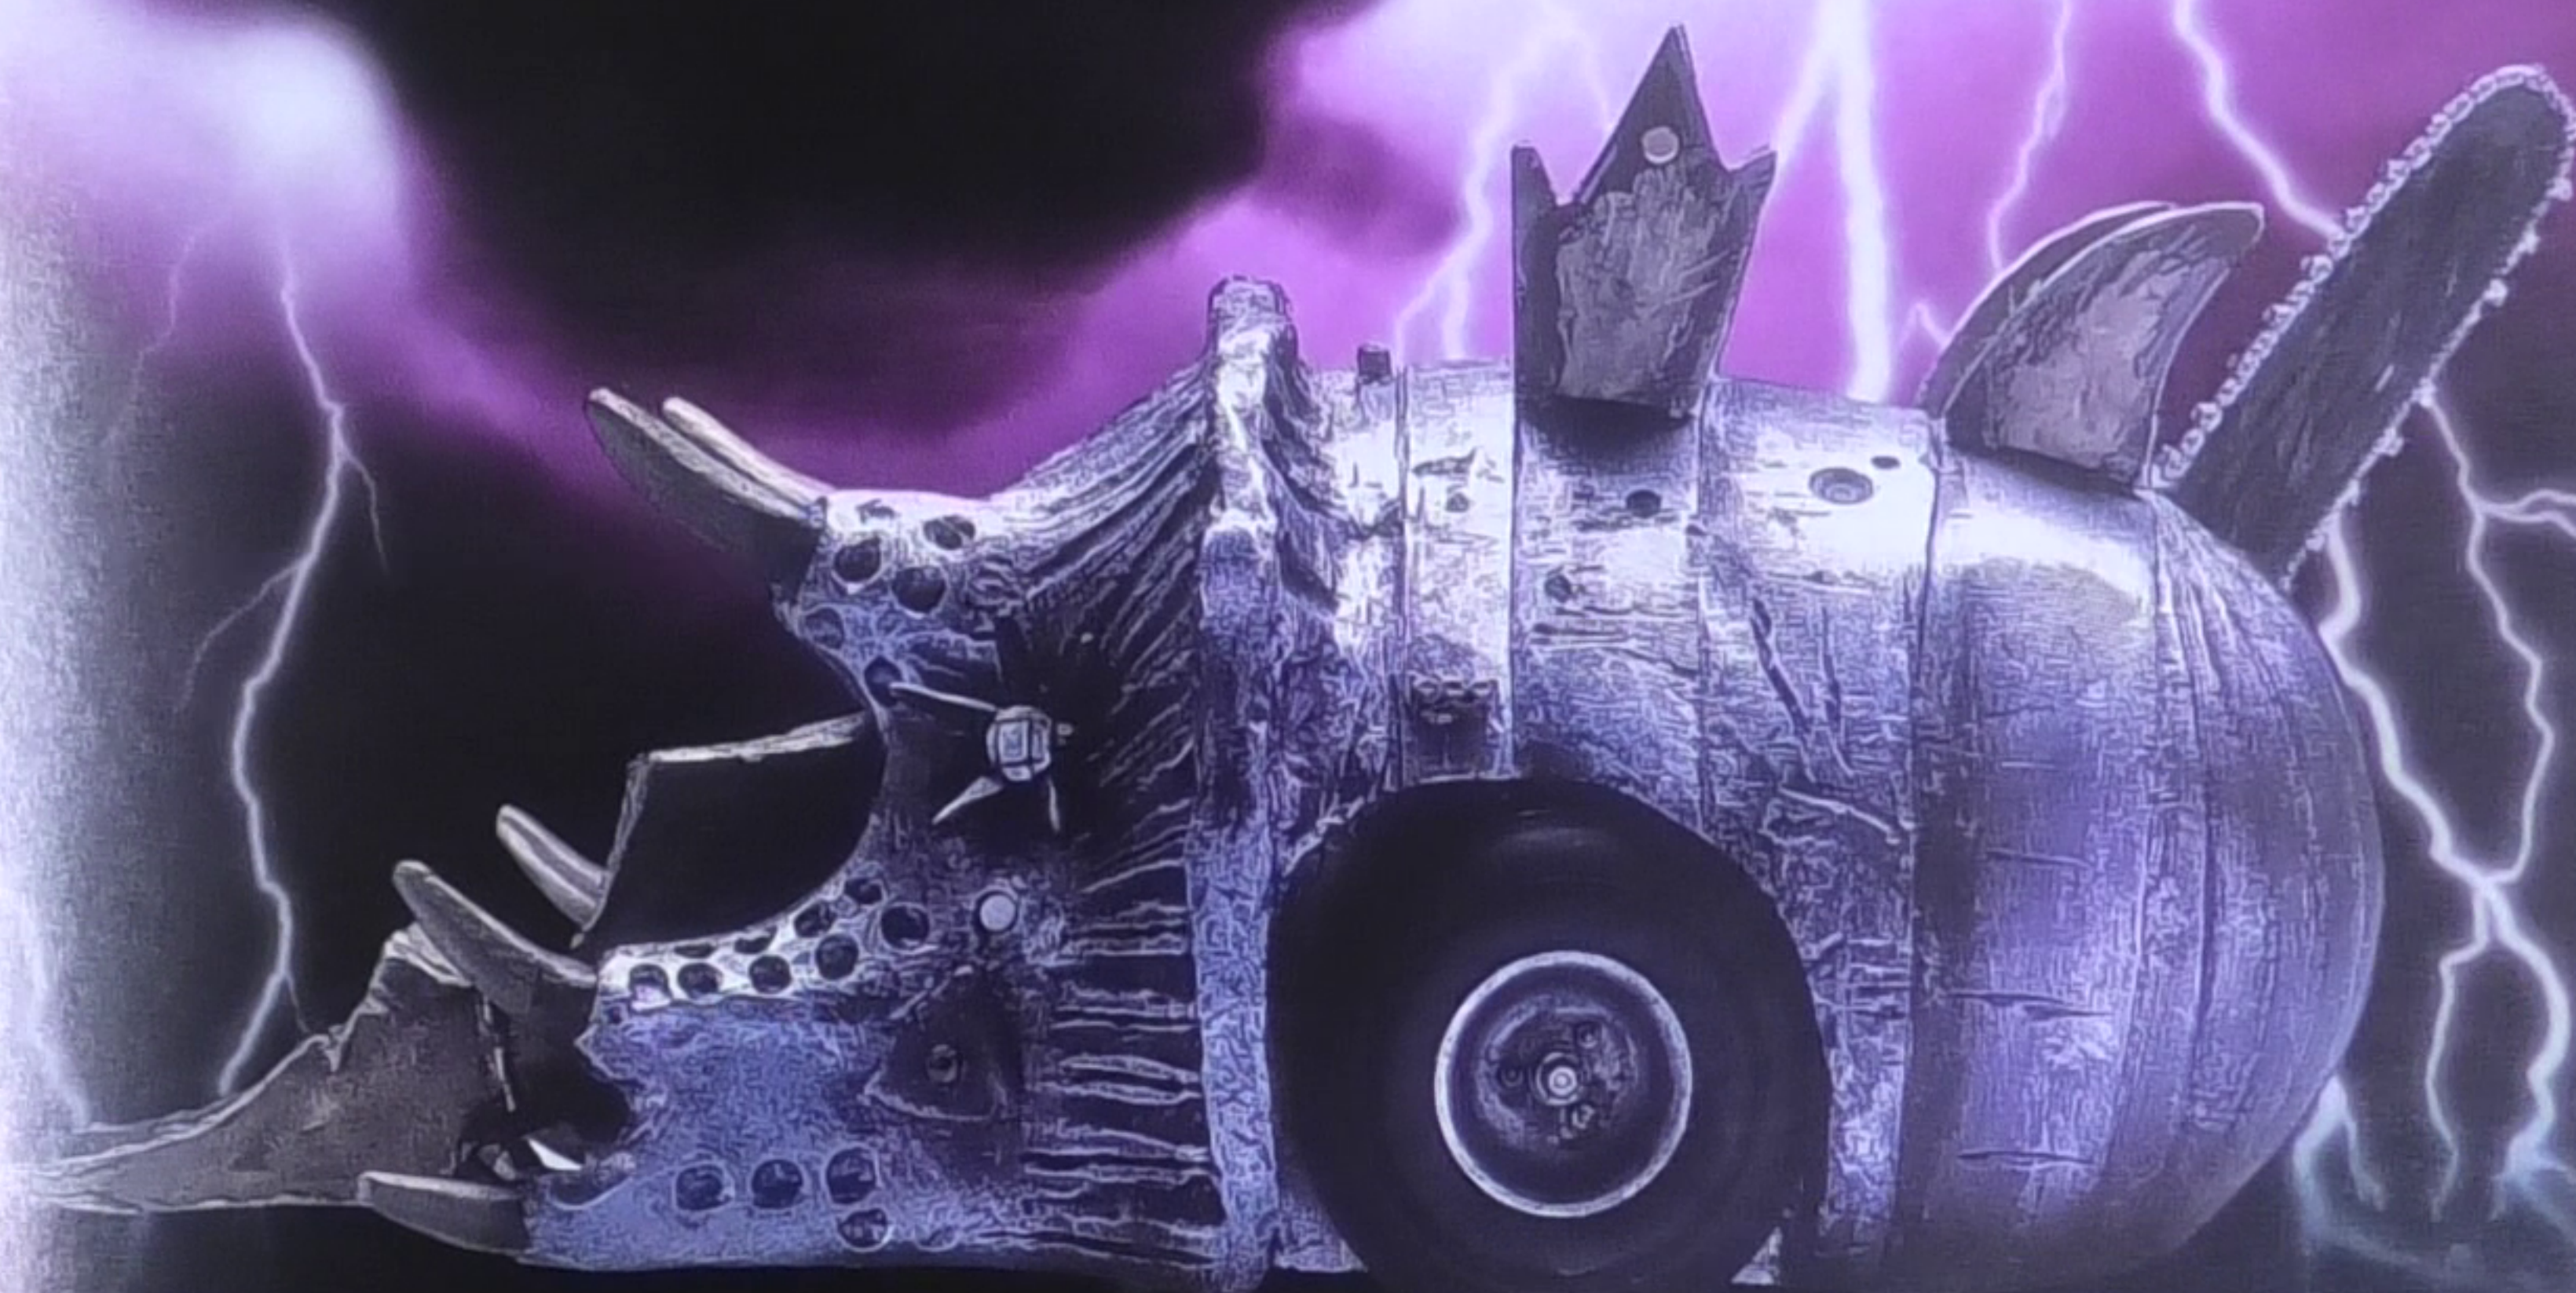

A unique opportunity to control your own replica house robot. This limited edition range has amazing detail and is 33cm long. Complete with exclusive Robot Wars radio-controlled handset. This robot has independently controlled wheels. Shunt also has a functional axe. Both Shunt and Matilda use separate frequencies of 27Mhz and 40Mhz respectively. Children and adults alike will be able to recreate battles in the school yard, living room or office.

RADIO
CONTROLLED
REPLICAS

MATILDA

R/C Matilda - RW-RCM

Radio Controlled Matilda

Matilda, the scariest female on Robot Wars, is recreated as a 35cm long radio-controlled toy. Each wheel is controlled independently by a uniquely designed Robot Wars handset which means Matilda can 'spin' just like the real robot. The handset has a special control that means her tusks can be raised and lowered.

WARNING:

These radio controlled replicas operate on frequencies in the 27Mhz and 40Mhz band. Buyers outside the UK should check that these frequencies are legal in their country before ordering.

POSTERS
